

■ LED Tail lamp kit (Clear lens / Smoke lens)

For CBR250R

A tail lamp kit that allows you to convert to LED simply by replacing the CBR250R stock tail lamp unit.

By making significant changes compared to the stock lens color and inner reflector shape, we allow you to achieve an improved custom look for the rear view.

■ LED tail lamp

Changing to LED increases visibility with a vivid brightness and beautifies the area surrounding the tail. Also, LED provides a tail lamp with better response and reduced energy consumption. Available in two types, clear and smoke.

※Can not install with immobilizer.
