

■ Crankshaft Support Plate (built-in 3-point support bearing) Monkey(FI)

It is part reinforced to increase the durability of the crankshaft by attaching the (FI) Monkey engine. Generator is attached to the L crank case cover, compared to the carburetor, flywheel mounting on the outside. Rotation of the flywheel weight, burden of acceleration and deceleration is doubled. Interference and flywheel generator, there is a possibility that damage to the crankshaft. By mounting this product, you can limit the deflection of the crankshaft that occur high rpm. Crankshaft support plate is Monkey made by our standard equipment for complete engine (FI), bore up engine parts are particularly effective.
