

■Enhanced aluminum forging brake arm kit (For Rear) **CROSS CUB**

By extending the length, you can make a brake with a lighter touch than using stock arm.
Through the forged aluminum alloy, increase the strength and the weight is lighter.

The treatment of the surface is buffing.

Length of the brake arm at the time of mounting: 10mm extension from the stock one.

Weight of the brake arm: 60% weight reduction from the stock one.

※Can not be used in the front drum brake.
