

■TAF 5-Speed Close Ratio Transmission kit GROM / MSX125

By mounting the 5-speed cross mission, you can accelerate smoothly while keeping the power band of the engine speed. In addition, while our bore up kit is installed, you can use the powerful output performance. It also can be used in the stock engine.

Gear ratio	Stock Transmission	1st:2.500	2nd:1.550	3rd:1.150	4th:0.923
		5-Speed Close Ratio Transmission	1st:2.333	2nd:1.684	3rd:1.272

· L. Crankcase cover gasket and R. Crankcase gasket are included with the set.

※ If you've installed a 5-speed cross mission, a stock speedometer does not work if you do not simultaneously mounting our speed sensor kit.

※ At the replacement of the mission, a flywheel puller, lock nut wrench and rotor holder for GROM / MSX125 will be required.

Flywheel puller (for GROM / MSX125) [00-01-1671](#)

Rotor holder [00-01-1001](#)

■Details of the speed sensor kit

It is the speed sensor kit that detects the rear wheel rotational speed of GROM and to drive the stock speedometer. Even if you change the sprocket or install our 5-speed cross mission, it will be possible to display the correct speed to stock meter. In addition, even if you change the tire size, by setting the rotary switch built in the stock meter drive unit body, it is also possible to correct the display speed to 16 steps in the range of stock ratio from about 114% to about 84%.

■Speed sensor kit

There are two types.

[05-06-0017](#) is with a dedicated stay for the stock caliper bracket to attach the speed sensor.

[05-06-0018](#) is mounted in our rear caliper bracket (for Brembo 2P caliper(20-6951)).

The speed sensor stay of [05-06-0017](#) is billet aluminum with anodized treatment.

※cannot be installed simultaneously with H.I.D.

※Only the operation with the stock wheel and the stock disk bolt is confirmed.

※While installing our 5-speed cross mission kit, if the speed sensor kit is not installed simultaneously, the stock speedometer will not work.
