

■ Oil catch tank kit

GROM/MSX125

This product release the pressure in the engine, and reduces the burden on the parts.  
As it is just fit to the inside of the left shroud, it can be installed without disturbing the appearance of vehicle.  
The internal structure of the union boss will reduce the oil discharge from the catch tank.

Tank capacity: 372cc

By adopting a swivel type to the billet breather cap, you can dismantle the cap without removing the hose.

Adopted an excellent bending resistance clear black breather hose.

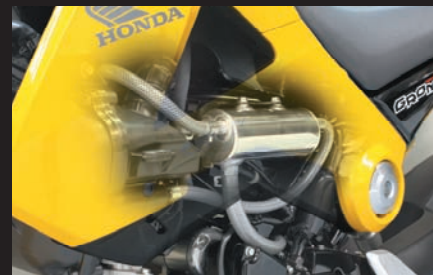

For Super head 4V + R cylinder head equipped bike, by connecting the breather hose to the inspection breather cover, can be let out the pressure in the cylinder head. Please use banjo and banjo bolt attached in our Super Head 4V + R cylinder head kit to connect the breather hose.

※When mounting to the vehicle body, it is necessary to cut the lower part of the shroud partially, which interferes with the return hose.

※Because the breather cap does not have the oil level gauge, please use genuine oil level gauge to check the oil level.

Oil catch tank kit

Just fit to the inside of the left shroud

Breather cap (swivel type) attached

Can be connected to the inspection breather cover of our Super head 4V + R cylinder head.
