

■ Aluminum steering handle pipe Z125 PRO

Maintaining substantially the same height as the original steering wheel, is aluminum handle bar pipe which allows comfortable riding position by reviewing the angle and the aperture angle.

It already has holes for rotation stopper for each throttle housings. Can be used a stock clutch wire and a brake hose.

By applying anodized after a shot blast, surface is finished in a unique beautiful surface, such as a semi-polished or matt.

Color : Silver, Black, Blue, and Gold.

Handle pipe diameter: $\phi 22.2$ (inner diameter: Approx. 14mm)

※The stock bar end cannot be installed. We recommend our billet bar ends. (Be careful that our 2 piece type billet bar end cannot be installed.)

※If you install our initial adjuster (06-06-07) simultaneously, the range of the steering wheel position adjustment will be limited by the interference.
