

■ Floating disc rotor

**CYGNUS X/SR(FI) (SE44J) 28S/1YP**  
**CYGNUS X SR(FI) (SEA5J) BF91**  
**CYGNUS X(FI) 2UB1**

**Newly released a floating disc rotor for SYGNUS X/SR(FI) with higher brake performance!**

Floating disc rotor (wave type) that can be attached with the genuine front caliper as it.

If heat is generated in the disc rotor by the braking, the accuracy of the friction surface deteriorates.

It may decrease the performance of the disc brake.

In case of the floating disc rotor, by separating the rotor and the inner disc portion into separate floating, the effect of thermal distortion is minimized, and will keep the stable brake performance.

Compared to the genuine disc rotor, the floating disc rotor has reduced the weight by making the rotor hub mounting portion made of aluminum.

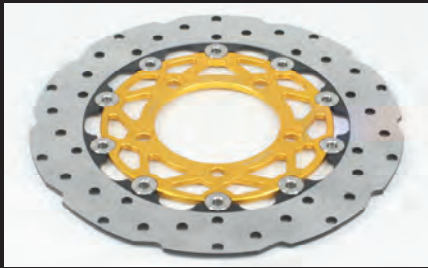

Furthermore, by adopting a wave type shape, weight reduced and maneuverability are improved. The friction surface of the floating disc rotor is made of stainless steel which is resistant to rust and excellent in durability.

Gold anodized finish is applied to the aluminum material of the rotor hub mounting part, which enhances the custom image around the front.

※※ This product is for CYGNUS X / SR (FI) (SE44J) 28S1~9 / 1YP1~5・(SEA5J) BF91・2UB1.

It can not be installed to SYGNUS X / SR (SE12J) 5UA1 ~B (carburetor model).

※ Our wave shape of our disc rotor and genuine rotor of SYGNUS X/SR(FI) (SE44J) 1YP1~5 are different pattern when installed.

Floating disc rotor

CYGNUS X SR(SEA5J)

CYGNUS X SR(SEA5J)

Name	Floating disc rotor
Applicable model	CYGNUS X/SR(FI) (SE44J) 28S1~9 CYGNUS X/SR(FI) (SE44J) 1YP1~5 CYGNUS X SR(FI) (SEA5J) BF91 CYGNUS X(FI) Taiwan model 2UB1
Item number	06-08-0090
