

## Oil catch tank kit

Z125 PRO

This product relieves the pressure inside the engine crankcase, thereby reducing the burden on each part. With this, it is possible to keep the engine performance constantly.

The installation at inside of the left side shroud and can be installed without modifying the exterior of the body.

■The cylinder type oil catch tank (372cc) Buffed aluminum outer finish

This cylinder type catch tank does not provide a separator that keeps oil and pressure inside the tank, but the internal design of the union boss suppresses the discharge of oil from the catch tank.

The union boss part adopts the screw type, by combining various optional parts, you can install it according to your preference, such as not to return, a handling of a free hose, other breather hose, etc.

Adopted a clear black breather hose with excellent bending resistance for connection hose.

※Due to the individual difference of the motorcycle, the cover on the left side of the vehicle may interfere with the oil catch tank.
