

[•] This kit can convert our old type dry clutch with three clutch discs into the five clutch discs the same as the current type.

• The Clutch outer is now made of the diecast aluminum, changed from the former aluminum casting, so that the durability and strength improved.

Please note that in ordering repair parts, be sure to quote the Repair Part Item No. Otherwise, we may not be able to accept your orders. There are some parts, however, for which we are not in a position to accept your order in just the quantity to be used. In this case, please take them in the quantity packed.

~ On installation ~

Place the vehicle on the flat surface with the maintenance stand properly. Drain the engine oil, and remove the clutch cover and clutch parts.

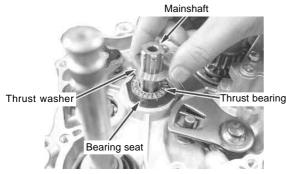

The clutch cover will be reused. Check the damages of the oil seal and other parts and replace it if necessary.

Also the genuine parts are to be checked with the reference to the genuine service manual and replace it if necessary.

(On installation of the primary gear)

 Install the clutch bearing seat into the trans mission mainshaft. (Set the bearing seat so its folded portion fits well with the crankcase so as to prevent it from rotating.)

Then, install the thrust bearing and thrust washer in this order into the mainshaft.

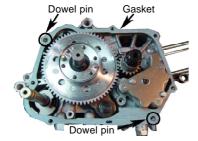

2 . Apply engine oil to the ball bearing of the primary driven gear COMP., and then the grease to the oil seal. And insert the primary driven gear COMP. into the mainshaft.

(Installation of the right side crankcase cover)

1 . Degrease both crankcase mating surfaces and install two dowel pins and R crankcase cover gasket on the crankcase.

Apply grease to the lip of the oil seal in the right side crankcase cover.

2 Install the oil seal of the R crankcase cover COMP., and tighten the R. crankcase cover temporarily with the cap screw on the crankcase. Then tighten the cap screw in a crisscross pattern to the specified torque.

▲ Caution: Apply the specified torque. Torque: 10 N • m (1.0 kgf • m)

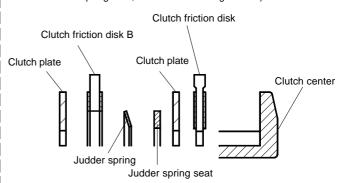

(Installation of clutch)

1 Install and tighten the clutch outer on the mainshaft loosely with flat head screws,

placing it with the dowel pins. And then screw them up diagonally to the specified torque.

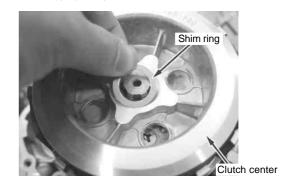

▲ Caution: Apply the specified torque. Torque: 10 N • m (1.0 kgf • m)

- 2 . Attach the seal bearing to the mainshaft.
- 3 .Into the clutch center, install the clutch friction disk, clutch plate, clutch friction disk B, judder spring seat and, judder spring as shown in the figure below. And attach the clutch plate and clutch disk alternately. Be careful about the direction of the spring when installing it. (Install the spring in the direction edged portion of the spring placed the Judder spring seat, as shown in the fig. below.)

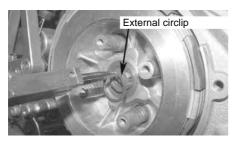

Degrease the oil completely not to remain oil on the clutch plates. Check that the clutch center and the clutch pressure plate fit in each other exactly.

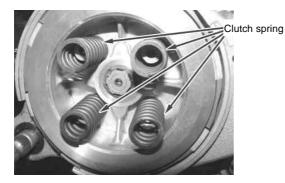

- 4 .Holding the boss of a clutch pressure plate, align the protrusions of the clutch friction disk with the grooves of the clutch outer. At the same time, align the clutch center with the spline of the main shaft, and insert it.
- 5 Holding the boss of the clutch pressure plate, align the protruding portion of the clutch friction disk with the clutch outer grooves. At the same time, align the clutch center with the mainshaft spline, and insert the mainshaft.
- Install shim ring 17x24x0.2 on to the clutch center.
 Please use shim ring 17x24x0.1 or 17x24x0.2 to hold clutch center maintain appropriately.

7 . Attach the supplied external circlip to the grooves in the main shaft. 1 0 . It likely to interfere a back side of clutch cover (A) with a clutch Make sure to place the circlip with the angular side facing out. Do not expand the external circlip more than necessary. If the external circlip does not easily fit into the main shaft grooves, please pull the mainshaft toward the outside.

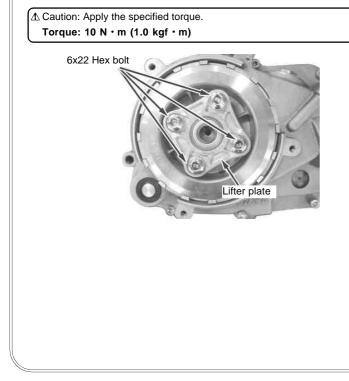

8 . Fix the clutch spring to the boss of the clutch pressure plate.

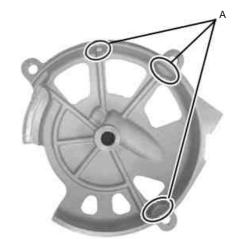

9 . Fix the 6x22 hex flange bolt on the clutch pressure plate and tighten them with hand properly, with the bearing of the clutch lifter plate facing outside.

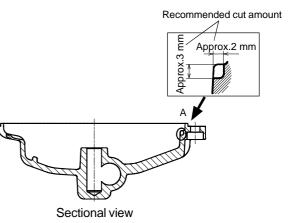

Pull the clutch lifter plate toward you and see if there is a clearance between the friction disks. If there is a clearance, this shows that the clutch center and the clutch pressure plate have got out of place with each other. Therefore, turn the clutch lifter plate to the right and left a little until they fit each other.

After making sure they fit closely, gradually tighten the 6x22 hex flange bolt diagonally, while pulling the clutch lifter plate toward you. Finally, tighten them to the specified torque.

- outer.
 - If so, please cut off the interfere part before install.

1 1 . Install the dry clutch cover referring to the instruction manual. Adjust free play at the adjuster part of the clutch cable reciever. Please put the engine oil.

(Inspection after installation)

- 1. With the engine turned off, shift the transmission to the first gear. Squeeze the clutch lever. Then, check that the rear wheel rotates when you move the machine, and that the rear wheel does not rotate when you have released the clutch lever.
- 2 . Shift the transmission into NEUTRAL, and start the engine. Then check each component for oil leak. If nothing is wrong, do a test run at slow speed in a safe place to check how the clutch works.
